

An **ecozone** is a large area of land that is defined by its distinct combination of living and nonliving, interacting elements – which include its geology, plant life, wildlife, climate and more. Pinpointing your ecozone can help you find the relevant resources to identify native plants and animals.

EASY GROW NATIVE PLANT SPECIES	PACIFIC Maritime	MONTANE Cordillera	PRAIRIES	BOREAL Plains	BOREAL Shield	MIXED Wood Plains	ATLANTIC Maritime
Bee Balm/Wild Bergamot  Monarda fistulosa		<b>~</b>	<b>~</b>		<b>~</b>	<b>✓</b>	<b>~</b>
